Project Name	Fertilizers Recommendation System For Disease Prediction
Maximum Marks	

Now a days agriculture is very important for life and helps to save the natural resources around as. Doing agriculture is the very hard in current senario because of many natural disasters are happening every day. Most of the plants are affected by many diseases due to pollution in water,air,soil. Identifyingthe disease is one of the huge hurtles in agriculture.Most of the plants are affected by leaf disease and its hard to find to correct fertilizerto cure.

The main objective of this project is to identify the disease in the plants and cure it in the early stage of the infection.In recent years, the number of diseases on plants and the degree of harm caused has increased due to the variation in pathogen varieties, changes in cultivation methods, and inadequete plant protection techniques.

An automated system is introduced to identify different diseases on plants by checking thsymptoms shown on the leaves of the plant Deep learning techniques are used to identify the diseases and suggest the precautions that can be taken for those diseases.
